

Outcomes:

- Group activities
- Education on recycling
- Behaviour out in public
- Team building
- Developing listening skills
- Adapting to a new eco environment

Today we got to experience the brilliance behind the scenes of an ERF Viridor (energy recovery facility) in Peterborough, our students learnt how it goes from arriving by bin lorry to steaming from the tower pipe in a steam form. We were given a tour of the control room and saw first hand the rubbish being brought in and how it is handled from there. We completed some activities to help us understand how the large real-life equipment works, and explained the importance of recycling and why rubbish is helping the planet! We spent time doing a quiz and making sure all the important information was saved in our brain forever.

Quotes:

"wow its bigger than I thought it was going to be"

"I loved going there it was so good"

"our electricity is because we have so much rubbish"
