

Maths and problem solving

On Monday 24th June we had a Maths theme day, to develop our problem-solving skills, and to help us see how Maths links to other subjects.

In the morning we had a carousel of activities involving tessellation in Art, code-breaking in English, looking at rhythm durations and counting beats in Music, using latitude and longitude to find interesting sites in Geography, working out how many paces high mountains are in TOL, and answering brain teasers in Maths.

The afternoon was spent completed an escape room task, where we had to find 10 clues hidden around the room and use a variety of Maths skills to answer the questions in order to crack the code to get out.

We all engaged well and worked really hard, and luckily everyone managed to escape!
